

## The Tapi Fitting Guide.

To make sure Tapi will fit and work on your tap, just follow the steps below. Easy!

### Get the scale right.

This fitting guide is only useful if it's accurate. Grab a ruler and zoom in or out on this image until the ruler below matches the real world.

### Dry your tap's spout.

Often there's a water droplet or two inside your tap that you can't see. You don't want any water damaging your phone so dry the bottom of your tap's spout with a cloth first.

### Check your tap's spout diameter.

Hold your phone under your tap's spout and centre the spout in the cross hairs below. **If you can see a ring of orange around your spout, you're in luck.** If you see a ring of blue, boo hoo. Sorry but Tapi only fits on tap diameters between 1.6cm and 2.6cm.

### Check your tap's spout length.

Hold your phone up to the side of to your tap's spout so the bottom of the spout is at the bottom of the orange area below. **If the spout diameter you measured above is *also* longer than the orange area below, you're in luck, buy a Tapi!** If you don't have enough spout to cover the orange area below, sorry, Tapi needs a minimum of 0.7cm worth of spout to grab onto.

MINIMUM 0.7cm SPOUT LENGTH

### The End.

We hope this helped. If you have any questions we're only an email or phone call away.

**Have an awesome day!**
